## Swagelok Instrumentation Ball Valves

Swagelok one-piece instrumentation ball valves have been well accepted and widely used in a variety of industries for many years.

Both the original Swagelok 40 series and the newer 40G series valves accommodate a wide range of actuator, flow path, and handle options, as well as offer ease of packing adjustment while inline.

## Important Information About Swagelok Instrumentation Ball Valves

- ⚠ **Swagelok ball valves are designed to be used in a fully open or fully closed position.**
- ⚠ **Valves that have not been cycled for a period of time may have a higher initial actuation torque.**
- ⚠ **A packing adjustment may be required periodically to increase service life and to prevent leakage.**
- Service instructions are shipped with each 40G series and 40 series valve.
- 40G and 40 series valves are factory tested with nitrogen at 1000 psig (69 bar), or the rated pressure if lower than 1000 psig (69 bar).  
40 series valve packing must be readjusted for service at higher than test pressure.  
See page 387 for standard production tests and page 398 for optional production tests.
- Instrumentation ball valves exposed to dynamic temperature conditions before installation may lose their initial packing load. Packing adjustment may be needed.
- 41G and 42G series valves require an 8 mm deep-well socket and 43G series valves require a 9 mm deep-well socket to adjust the packing bolt.
- 41 and 42 series valves require a 3/8 in. open-ended wrench; 44 series valves require a 1/2 in. open-ended wrench; and 45 series valves require a 5/8 in. open-ended wrench to adjust the packing bolt.
- 43 series valves require an adapter to adjust the packing bolt. Ordering number: **MS-WK-43**

## Features

### 40G Series

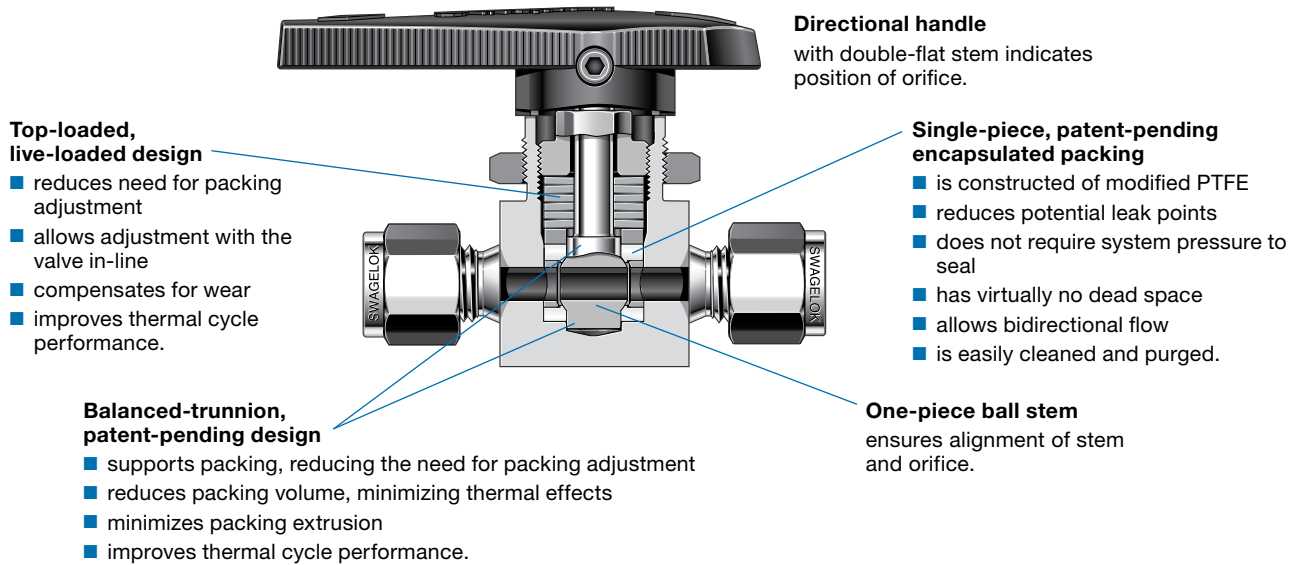

Swagelok 41G, 42G, and 43G series valves easily replace original stainless steel 41, 42, and 43 series valves.

## Pressure-Temperature Ratings

The 40G series valve is designed for thermal cycling in both environmental and heated-process applications.

Ratings shown below apply to on-off (2-way) and switching (3-way) valves. Ratings for switching (5-way and 7-way) and crossover (4-way and 6-way) valves are shown on pages 385 and 386, respectively.

**Temperature ratings are limited to 150°F (65°C) max with UHMWPE packing.**

## Switching (5-Way and 7-Way) Valves (40 Series)

### Features

- Capsule seat packing allows reliable switching.
- Flow can be switched from a single inlet to multiple outlets or from multiple inlets to a common outlet.
- 43Z and 43Z6 series valves have a spring-loaded detent for exact port positioning.
  - Detent handle components:
    - Handle: nylon with brass insert
    - Set screw: S17400 stainless steel
    - Pins, detent plate: nickel-plated steel
    - Springs: steel/ASTM A228

### Pressure-Temperature Ratings

Valve Series	Temperature °F (°C)	Working Pressure psig (bar)
43Z (5-way)	PTFE packing: 50 to 150 (10 to 65)	2500 (172)
45Z (5-way)	Live-loaded PFA or UHMWPE packing:	1500 (103)
43Z6 (7-way)	-65 to 150 (-53 to 65)	500 (34.4)

Pressure ratings for valves with Swagelok tube fitting ends may be lower due to the tubing pressure rating. See Swagelok *Tubing Data* (MS-01-107), page 224.

## Testing

Every 40G series and 40 series ball valve is factory tested with nitrogen at 1000 psig (69 bar) or at its maximum rated pressure if less than 1000 psig (69 bar). Seat tests have a maximum allowable leak rate of 0.1 std cm<sup>3</sup>/min.

## Cleaning and Packaging

All 40G series and 40 series valves are cleaned in accordance with Swagelok *Standard Cleaning and Packaging (SC-10)* (MS-06-62), page 1174.

Special cleaning and packaging in accordance with Swagelok *Special Cleaning and Packaging (SC-11)* (MS-06-63), page 1175, to ensure compliance with product cleanliness requirements stated in ASTM G93 Level C, is available as an option. See **Process Options**, page 398.

## Vent Port and Stem Extension Options

### Vented Valves

Pressure rating for vented valves is 500 psig (34.4 bar).

#### 2-Way, Straight-Pattern Valves

When the valve is closed, the downstream port vents to atmosphere through a vent hole in the side of the valve body.

#### 2-Way, Angle-Pattern and 3-Way Valves

When the valve is closed, the bottom port vents to atmosphere through a vent hole in the side of the valve body.

### Ordering Information

To order a vented valve, insert **V** into the valve ordering number.

Example: SS-43GVS4

## Pneumatic Actuators

Swagelok rack and pinion pneumatic actuators are compact, lightweight, and easily mountable. The actuators are available in spring-return and double-acting modes. Straight, angle-pattern, 4-way, and 3-way valves with **H** and **L** flow paths require 90° actuation; all other 3-way valves require 180° actuation.

For technical data, including materials of construction, air displacement, and weight, see the *Swagelok Ball Valve Actuation Options* catalog (MS-02-343), page 468.

**⚠ Caution: Actuated assemblies must be properly aligned and supported. Improper alignment or inadequate support of the actuated assembly may result in leakage or premature valve failure.**

## Pressure-Temperature Ratings

## ISO 5211-Compliant Pneumatic Actuators

These Swagelok rack and pinion pneumatic actuators are ISO 5211 compliant and are suitable for general applications. They are available in spring-return and double-acting modes. Straight, angle-pattern, and 3-way valves with **H** and **L** flow paths require 90° actuation; all other 3-way valves require 180° actuation.

For technical data, including actuator materials of construction and weight, see the *Swagelok Ball Valve Actuation Options* catalog (MS-02-343), page 468.

For additional information on selecting and sizing ISO 5211-compliant actuators, see the *Actuated Ball Valve Selection Guide—ISO 5211-Compliant Actuator Mounting Bracket Kits* (MS-02-136), page 484.

### Certifications

Factory-assembled valve assemblies with ISO 5211-compliant actuators are available with ATEX conformity on request at the time of order quotation. ATEX certification is not available for field assemblies.

**⚠ Caution: Actuated assemblies must be properly aligned and supported. Improper alignment or inadequate support of the actuated assembly may result in leakage or premature valve failure.**

### Pressure-Temperature Ratings

Maximum actuator pressure is 116 psig (8.0 bar). See **Minimum Actuator Pressure** table below for minimum actuator pressures.

Actuator Service	Actuator Service Designator	Temperature Range °F (°C)

## Options for ISO 5211-Compliant and Swagelok Pneumatic Actuators

Swagelok offers a range of accessories to enhance instrumentation and process ball valve performance and control, including solenoid valves, limit switches, and position sensors. Factory assemblies and kits for field assembly are available.

For more information, see the *Swagelok Ball Valve Actuation Options* catalog (MS-02-343), page 468.

### ■ Valve with No Handle Stop and No Handle (40G Series)

provides increased accessibility to packing bolt.

To order, add **-NHS** to the valve ordering number.

Example: SS-43GS4-**NHS**

For more information on actuator options, contact your authorized Swagelok representative.

## Electric Actuators

Swagelok electric actuators can be used to control the position of Swagelok instrumentation ball valves; alternating- and direct-current models are available. An electrical signal is used to change valve position from remote locations. Integral limit switches provide an output signal of the valve position, even between positions. The drive shaft of these actuators rotates in one direction.

### Dimensions

Dimensions, in inches (millimeters), are for reference only and are subject to change.

See the Swagelok *Electric Actuators* catalog, MS-01-35, for features, testing, materials of construction, technical data, and dimensions.

Electric actuators are not available on angle-pattern valves and vented valves.

**⚠ DO NOT USE THESE ACTUATORS ON VENTED BALL VALVES. THE DRIVE SHAFT OF THESE ACTUATORS ROTATES IN ONE DIRECTION.**

**⚠ Not CE marked.**

### Production Tests

To specify an optional production test in place of the standard testing, add a designator from the table at right to the valve ordering number.

Examples: SS-43GS4-**PT**  
B-43S4-**PT**

Test Designator	Production Test Description

Examples: SS-41GLS2 for a two-port 41G series valve with **L** flow path  
 SS-43GXHLS4 for a three-port 43G series valve with **HL** flow path

#### 40 Series

Two-and three-port paths are available for brass and alloy 400 valves. Four-and five-port paths are available for stainless steel, brass, and alloy 400 valves.

Add a material designator and insert a flow path designator into a 40 series basic ordering number as shown.

Examples: **B**-41LS2 for a brass two-port 41 series valve with **L** flow path  
**SS**-44XHS6 for a stainless steel three-port 44 series valve with **H** flow path

Material	Valve Series	Designator
316 SS	43Y, 43Z, 44, 44X, 45, 45X, 45Y, 45Z	SS
Alloy 400	41, 41X, 42, 42X, 43, 43X, 43Y, 43Z, 44, 44X, 45, 45X, 45Y, 45Z	M
Brass	41, 41X, 42, 42X, 43, 43X, 43Y, 43Z, 44, 44X, 45, 45X, 45Y, 45Z	B

#### **Warning: Cross-port flow may occur in some sizes and flow paths.**

To eliminate cross-port flow, specify an orifice of:

- 0.049 in. for 41G, 42G, 43G, 41, 42, and 43 series valves whose standard orifice is larger than 0.049 in. (1.24 mm).  
 Examples: SS-43GHLS4-**049**  
 B-43XLS4-**049**
- 0.093 in. for 44 and 45 series valves whose standard orifice is larger than 0.093 in. (2.36 mm).  
 Examples: SS-44LS6-**093**  
 SS-45YHS8-**093**
